Theoretical and physical aspects of nuclear shielding

42

Cynthia J. Jameson and Angel C. De Dios

1. Theoretical aspects of nuclear shielding	42
2. Physical aspects of nuclear shielding	53
References	63

Applications of nuclear shielding	70
<i>Shigeki Kuroki, Shingo Matsukawa and Hidekazu Yasunaga</i>	
1. Introduction	70
2. Shielding of particular nuclear species	70
References	130
Theoretical aspects of spin–spin couplings	151
<i>Hiroyuki Fukui</i>	
1. Introduction	151
2. Relativistic calculation of spin–spin couplings	151
3. Triplet instability	154
4. Vibrational average of indirect nuclear spin–spin coupling constants	156
5. Improvement of basis sets	158
6. ^{15}N – ^{15}N coupling constants and the pentazole anion	159
7. Spin–spin couplings including ^{29}Si nucleus	160
8. Complete basis set limit calculation	160
9. Spin–spin couplings including ^{19}F nucleus	161
10. Spin–spin couplings including Ag, Se, and Sn nuclei	162
11. Hydrogen bonding	163
12. Conformational studies	164
13. Spin–spin couplings including B, N, P, Li, and Al nuclei	166
14. C–C, C–H, and H–H spin-spin couplings	168
15. The anomalous deuterium isotope effect in methane	170
References	171
Applications of spin-spin couplings	179
<i>Krystyna Kamińska-Trela and Jacek Wójcik</i>	
1. Introduction	179
2. New methods	180
3. One-bond couplings to hydrogen	182
4. One-bond couplings not involving hydrogen	184
5. Two-bond couplings to hydrogen	190
6. Two-bond couplings not involving hydrogen	193
7. Three-bond hydrogen-hydrogen couplings	195
8. Three-bond couplings to hydrogen	200
9. Three-bond couplings not involving hydrogen	203
10. Couplings over more than three bonds and through space	205
11. Couplings through hydrogen bonds	207
12. Residual dipolar couplings	209
References	213

Solid state NMR spectroscopy	227
<i>A. E. Aliev and R. V. Law</i>	
1. Introduction	227
2. Reviews	227
3. Experimental developments	230
4. NMR parameters: experimental and theoretical studies	239
5. Applications	242
References	260
NMR of proteins and nucleic acids	268
<i>P. J. Simpson</i>	
1. Introduction	268
2. New methodologies	268
3. High resolution studies of biomolecules	276
4. Large and/or challenging systems	280
References	283
NMR of carbohydrates, lipids and membranes	290
<i>Elizabeth F. Hounsell</i>	
1. Introduction	290
2. Membranes	291
3. <i>In vivo</i> and <i>ex vivo</i> studies	294
4. Structural studies in amyloid, prions and AGEs	295
5. Studies on membrane-virus interactions	297
6. Structure/function and conformation in glycobiology	298
7. Proteoglycans	299
8. Glycoconjugate (bio)synthesis	301
9. Natural products	302
10. Materials science	308
References	310
Synthetic macromolecules	322
<i>Hiromichi Kurosu and Takeshi Yamanobe</i>	
1. Introduction	322
2. Primary structure	322
3. Liquid crystalline polymers	322
4. Imaging and diffusion	332

5. Characterization of the synthetic macromolecules	333
6. Polymer blend and dynamics of the synthetic macromolecules	342
References	346
NMR in living systems	363
<i>M. J. W. Prior</i>	
1. General applications and new methodologies	363
2. Microorganisms	368
3. Plants and algae	369
4. Tissues	369
5. Clinical	375
References	391
Nuclear magnetic resonance imaging	398
<i>Tokuko Watanabe</i>	
1. Introduction	398
2. Historical aspects and introductory articles	398
3. Instruments and data processing	398
4. Pulse sequences and data processing	403
5. Other nuclei and hyperpolarized nuclei	407
6. Dynamics: flow and diffusion	409
7. Polymers and catalytic reactions	410
8. Plant, seed, fruit and soil	411
9. Food and food processing	413
10. <i>In vivo</i> and <i>ex vivo</i>	414
11. Contrast agent	417
References	418
NMR of liquid crystals and micellar solutions	424
<i>Gerardino D'Errico and Luigi Paduano</i>	
1. Introduction	424
2. General articles: reviews, methods, models	425
3. Lipid crystals	426
4. Micellar solutions	442
References	450

Oriented molecules	456
<i>K. V. Ramanathan, Nitin P. Lobo and C. L. Khetrpal</i>	
1. Introduction	456
2. Reviews, theory and general studies	457
3. New techniques	458
4. Studies of oriented small molecules	463
5. Relaxation and dynamics NMR studies	467
6. Novel mesophases and orientational order	468
7. Membranes and molecules oriented therein	470
8. Weak ordering and biomolecular studies	475
References	482
